Lets talk about domestic tourism

The consumption during 2012 of domestic tourism was of 9.2 billion dollars and 46.4 million landings were registered.

The consumption during 2012 of domestic tourism was of 9.2 billion dollars and 46.4 million landings were registered.

Domestic tourism passed from 28 million arrivals to local destinations in 2003, to 46.4 million in 2012, which would imply an accumulative growth of 62% with a higher access of the population to tourism as well as further inclusion of the sectors with lower resources.

This means the increase in the touristic activity did not concentrate in those sectors which, traditionally, used to travel – these, by the way, did also intensify tourism-, so, in this frame; new agents incorporate to the travelling market, expanding the touristic consumption.

Between 2006 and 2011, the amount of local residents who had done at least one trip in the year grew 9 points. In 2006, the percentage of the population who had done at least one trip represented the 35%, whereas in 2011 the percentage reached the 44% of the population.

These comparisons are also useful to watch the reduction of the gap between the different social sectors in the touristic variables: during 2006 from every 11 holiday trips taken by the population with greater incomes, the lower incomes section made just 1. In the year 2012, the relationship changed to 4 to 1.

In summary, during the last six years, the social inclusion to tourism gained land with a reduction of 60% in the gap of trips. The same has happened in touristic expenses: during 2006, the tourists with higher resources expended \$27 for every \$1 that the ones with lower incomes expended. This gap has been reduced to \$14 in 2011 and even to \$8 in 2012.
